

AUTOMOTIVE PORTFOLIO

No industry in the world demands excellence in every aspect of production like automotive manufacturing. Which is why A-SAFE, the inventors and manufacturers of the world's first fixed polymer safety barrier system, have become key suppliers to some of the globe's greatest automotive brands.

A-SAFE are the world leaders in barrier protection for the industrial workplace. Our products protect people, structures and equipment and offer a fast and sustained return in investment. As part of Health & Safety compliance and as an aid to streamlining your facility's efficiency, **A-SAFE** barriers offer unrivalled protection and enduring performance.

Driving Forces in Safety

If it's a brand new facility that needs protecting and maintaining in the best possible way, or an existing workplace that needs upgrading and streamlining, companies with an intelligent Health & Safety brief select **A-SAFE** barriers.

First, **A-SAFE** barriers are installed as part of a comprehensive traffic management solution, segregating vehicles from pedestrians and dramatically reducing the chances of vehicle accidents. Second, **A-SAFE's** independently-tested barriers offer protection like no other. They flex when hit, absorbing impact forces and dissipating them through their patented material, **Memaplex**. In turn, this protects the barrier itself, the vehicle driver, the pedestrian, the fixtures and fittings and, ultimately, the often huge costs to the business. Third, **A-SAFE** barriers look good and require next to no maintenance, meaning repainting, corrosion, manpower costs and facility downtimes are almost eradicated.

It's a successful working model that has already seen **A-SAFE** systems installed at BMW, Jaguar Landrover, Kia, Volvo, Toyota, Chrysler, Volkswagen, Lexus, Daimler, Porsche, Nissan, Mercedes and many more automotive clients.

Contact us now and find out how **A-SAFE** can improve your facility and offer a considerable long-term return in investment.
