

# Hygienic protection at pharmaceutical company

A-SAFE recommends dedicated hygiene-optimised protection for industrial vehicles and pedestrians at Johnson & Johnson's brand-new manufacturing facility.

 Manufacturing  Health & Hygiene

## Customer:

Johnson & Johnson is a multinational company selling medical devices, pharmaceutical and packaged goods manufacturing since 1886. The brand has 250 subsidiary companies and operations in 60 countries.

## Situation:

In a brand-new facility, Johnson & Johnson required safety barriers to efficiently protect employees against collisions with workplace vehicles. They also needed a barrier capable of protecting machinery and equipment, with a hygiene focus due to the nature of products being manufactured.

## Solution:

Over a two-day installation, A-SAFE manufactured, supplied and installed three key safety solutions to protect the facility, including: iFlex Pedestrian 3 Rail Barrier to segregate and guide pedestrians through the site, Bollards to guard corners and provide highly visible traffic guidance for vehicles, and iFlex Single Traffic Barrier to shield columns and interior walls against impacts from hand-powered equipment.

Where sanitation is a priority, we provide industry leading solutions for safety, segregation and protection. Specifically designed for the health and hygiene industry – our products benefit from hygiene seals, no ingress points, water resistance, a convenient wipe clean exterior and stainless steel base plates.

## Products:

- iFlex™ Single Traffic Barrier
- iFlex™ Pedestrian 3 Rail Barrier
- Bollards
