

Traffic segregation for technology supplier

A-SAFE were approached to replace underperforming steel barriers with a high-performance protection solution at Bosch's UK warehousing facility.

 Warehousing & Distribution  Retail

Customer:

Bosch Group is a leading global supplier of technologies and services across automotive, industrial, consumer goods and building.

In the UK, Bosch operates 41 locations and has over 5,300 employees.

Situation:

The team at Bosch needed to ensure the safety of employees in their UK warehousing facility by segregating pedestrian traffic flow from busy truck ways with a distinct, high performing and eye-catching solution. The site previously had steel barriers installed, but was continually experiencing constant damage to concrete, causing expensive and frequent repair costs. In addition, personnel were apprehensive of the dangerous sharp edges steel barriers created.

Solution:

A-SAFE manufactured, supplied and installed 3.5 metres of Pedestrian Barrier for Bosch to trial, and after experiencing the product's benefits, Bosch installed Double Traffic and Single Traffic+ Barriers to shield and segregate traffic throughout the site, safeguarding people and vehicles through defined, designated traffic routes.

Following the installation, Bosch's Warehouse Manager explained: "We have had no reported instances of serious impact damage and no work has been required on the barriers. We are pleased knowing that the solutions are doing their job"

Our solutions are crafted from a patented product called Memaplex™ – a blend of eight materials, expertly combined to create a robust, flexible ingredient that can withstand heavy impacts from trucks and other workplace vehicles.

Products:

- Double Traffic Barrier
- Single Traffic+ Barrier
- Pedestrian Barrier
